

Gaultheria procumbens

# Merry Berry

**Big Red**

Item no.: GP0102P

- Mounded plant habit
- Many attractive, large-sized berries
- Excellent evergreen – perfect use for indoor and outdoor

<b>Crop Time</b>	Spring: 43 weeks
<b>Height</b> ∅	10 " / 25 cm
<b>Exposure</b>	Sun - Partial shade
<b>Seed Form</b>	BeGreen Pelleting
<b>Heat Zone</b>	9-1
<b>Hardiness Zone</b>	4-9
<b>Best Uses</b>	Pot Plant

## CULTURE GUIDE

Gaultheria procumbens Merry Berry

### **Sowing method**

Sow 6-8 seeds per cell in a 128 or 264 tray (or comparable format).

### **Germination**

20-30 days

### **Media**

Fine loose substrates or glued plugs are suitable growing media. Maintain a pH value of around 4 (3.8 to 4.5).

In the beginning, the EC value should not exceed 1 to 1.25 mS/cm. Always use or mix with rainwater, if possible.

Higher light and temperature levels will encourage germination. A soil temperature of 20 °C and high humidity ensure the best germination results. The first phase, from germination until the established young plant, is approximately 8 weeks.

Finished young plants after approximately 13 weeks.

### **Temperature**

68 °F / 20 °C
